Portfolio: [https://blessingkadiri.vercel.app/]

Summary

Frontend engineer who builds scalable, user-centered web applications with React and modern JavaScript. Combines strong UI/UX thinking with practical engineering execution by translating product requirements into clean architecture, resilient UI states, and performant interfaces. Currently shipping an AI-powered application with real API integrations and dynamic data flows. Interested in building reliable financial systems at scale.

Technical Skills

Frontend: JavaScript (ES6+), React, HTML5, CSS3, TailwindCSS
Core Engineering: Asynchronous JavaScript, component architecture, data flow management, basic data structures & algorithms
State Management: Context API (applied), scalable state patterns
APIs & Data: REST API integration, error handling, loading & fallback states
Tools: Git, GitHub, Figma
Practices: Clean code, reusable components, responsive design, performance-conscious development

Projects

AI Video Summarization Platform (Capstone – In Progress)

- Building an AI-powered web application that processes and summarizes long form video content via external APIs
- Architected reusable React components and structured the app for maintainability and scale
- Implemented asynchronous data handling with clear UI states (loading, success, failure, empty)
- Designed fallback and error-handling flows to improve reliability under API failure conditions
- Managing dynamic rendering of results and optimizing state updates for smoother user experience

Luna – Wellness & Mental Health Mobile App (Case Study)

Product Designer

- Designed a mobile wellness application with emphasis on privacy, trust and culturally appropriate interaction patterns.
- Conducted user research to understand behavioural habits, expectations, and concerns around digital wellness tools.
- Defined core user flows, including onboarding, content access, and daily interaction loops.
- Developed wireframes and high fidelity prototypes in Figma, focusing on clarity and emotional neutrality

Trajectra — A Drone Operations Console (Capstone Team Project)

Product Designer (Team of 22)

- Contributed to a complex DroneOps web console within a cross-functional team environment
- Designed authentication and access flows including login, recovery, and role-based entry
- Analyzed usability feedback and testing data to identify friction in onboarding flows
- Simplified system interactions by removing redundant steps and improving system feedback
- Iterated designs to reduce user errors and improve task completion clarity

Education & Training

Frontend Engineering Bootcamp (In Progress) Dev and Design Bootcamp

- Intensive, project-based training covering React, JavaScript, and software development lifecycle
- Focus on building production-ready applications with real-world constraints

UI/UX Design Certification Dev and Design Bootcamp – 2025

UI/UX Design Certification Udemy – 2025

MA English Language University of Lagos – 2019

BA English and Literature University of Benin - 2015
